

Pay Later

Abstract

The **Pay Later** web application is a streamlined credit management platform designed specifically for small businesses. It enables merchants to efficiently track customer credit transactions and payments, functioning like a modern digital credit book. Merchants can register and must be approved by the platform admin to ensure quality and security. The system supports essential features such as customer management, recording credits and payments, viewing detailed ledgers, and generating reports. Merchants can send automated email reminders for outstanding dues and receive important announcements via in-app notifications from the admin. Robust authentication with email verification and password recovery ensures secure access for all users. The platform empowers small businesses to maintain transparent financial records, improve cash flow management, and foster trust with their customers through timely notifications and easy-to-use digital tools.

Modules:

Merchants

- Sign up with email, password, and business details
- Verify email through a confirmation link
- Login and logout securely
- Recover/reset password via email link
- Add, edit, and delete customer information (name, phone, notes)
- Record credit transactions for customers (amount, date, notes, optional files)
- Record payments received from customers (amount, date, method)
- View complete transaction history (credits and payments) for each customer
- See dashboard summaries: total credit given, payments received, and outstanding dues
- Send email reminders to customers for outstanding dues
- Receive and view in-app announcements from admin
- Export customer transaction ledgers to PDF

Admin

- Receive and review new merchant signup requests
- Approve or reject merchant registrations
- Manage merchant account statuses (active, suspended)
- Login and logout securely
- Recover/reset password via email link
- Send announcements as in-app notifications to merchants
- View dashboard with total merchants, pending approvals, and platform usage statistics

Automated System Actions

- Send email verification after merchant signup
- Notify merchants about approval or rejection via email
- Send weekly summary emails to merchants
- Send password reset instructions via email
